

INSTANT FLEX

INSTANT SUITE

Instant Flex meets the **challenges of flex office and free sitting**. Synchronized with Instant Booking, it adapts to the needs of different corporate cultures. Instant Flex helps you to optimise your workspaces so that they are adapted to your specific needs.

It is possible **to book a shared office** for a given period of time... A manager's office, that becomes available during his holidays or travels, is transformed into a reservable workspace. Instant Flex provides the right tools: QR Code, DeskTag or BoxPad with its **infrared and thermal presence sensors**.

Book a shared desk

Display resources status on all 3D floor maps

Measure occupancy ratio in real time

Confirm a booking and manage no show

MAKE AN OFFICE BOOKABLE AND DISPLAY ITS AVAILABILITY

With Instant Booking, a GroomPad or Instant Mobile by flashing a QR Code, **your employees can quickly find and book an available office** on any floor of the building.

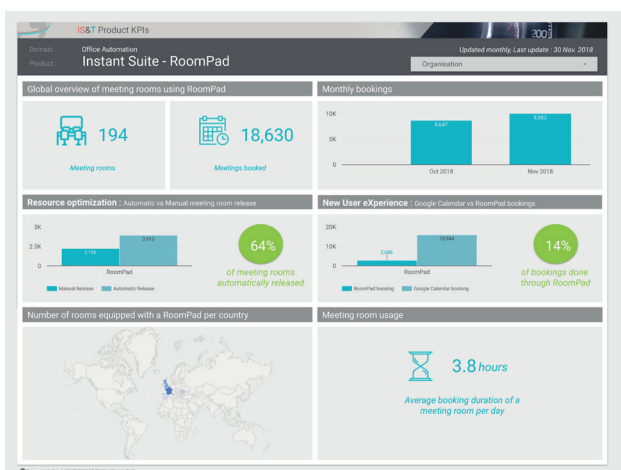

CONFIRMATION AND AUTHENTICATION

- To confirm the desk booking by authenticating yourself, flash the QR Code on the DeskTag.
- The status of this desk is then visible on the GroomPad, the RoomPad® and on the Instant Mobile app: green, it's free, red, it's busy!
- No need to confirm your booking if infrared and thermal motion sensors are installed: **the confirmation is done automatically**, just sit at the booked desk.
- Your employees can **confirm their booking and automatically** identify themselves with the BoxPad: they pass their badge in front of the touchscreen in order to be recognised.

OPTIMISATION OF SQUARE METERS

- In the case that a booking is not honoured, the desks are automatically vacated, and the employees are immediately informed. Instant Flex reduces **no show and makes the spaces available again**.
- Measure occupancy rates in real time with infrared or thermal motion sensors. **Anonymous information recorded by the sensors is broadcasted permanently and in real time** (occupied desks, non-bookable spaces, available meeting rooms).
- These data are visible on a GroomPad, a RoomPad® and Instant Mobile. Each employee can then **view at any time which shared offices are available**. On Instant Booking, a metrics report allows an **objective assessment on the resources occupation** in your buildings.

INTEGRATION AND COMPLIANCE

Instant Booking is compatible with any presence sensor communicating with SigFox or LORA networks. Ubigreen, Irlynx, CSM and Disruptive Technologies sensors are already integrated into Instant Booking.

The BoxPad has the following specifications:

Size: 3.5"

Touch screen and colored LED

NFC/MiFare badge reader (HID optional)

Optional thermal and infrared sensor
