

Microsoft chooses SharingCloud to integrate its Graph API TAP

Boulogne-Billancourt, August 23, 2022.

- **What are Microsoft TAPs (Technology Adoption Programs)?**

TAPs, or Technology Adoption Programs, are designed by Microsoft to get feedback from their customers and partners on new products and features as they are released. The TAP also provides customers with insight into what Microsoft is doing in the market to compete with other industry experts.

- **What is the Graph API?**

Microsoft Graph is a gateway (REST API) that allows customers and partners to access data in Microsoft 365. It provides a unified model that allows users to access the vast amount of data available in Microsoft 365, Windows 10 and Enterprise Mobility + Security.

Microsoft Graph Data Connect allows SharingCloud to interact in a new way with the data available through the Microsoft Graph APIs. The data connection provides a unique set of tools that simplify the creation of intelligent applications, all in the Microsoft cloud.

This allows us to create experiences around the unique context of users to help improve their journey.

- **Integrating SharingCloud into the program**

It was our partnership with some of our major customers, especially with EDF, that led us to develop an integration prototype with Microsoft Graph API and brought this new challenge. With the help of the Microsoft Graph API product team, which was fully involved in this project, we met our customers' security requirements.

Following these successful projects, Microsoft started the discussion on customer feedback and invited SharingCloud to join the Microsoft Graph API TAP to anticipate our customers' needs.

We are now involved in monthly events to exchange with all TAP users.

- **Benefits for SharingCloud**
 - Be informed about roadmaps, product features
 - Be part of the Graph API user club
 - Provide feedback or co-develop some product features
 - Gain credibility with Microsoft tools that are widely used in our customers' IS
- **Benefits for customers/partners**
 - Ensure that SharingCloud solutions are integrated into the IS with the highest level of security
 - SharingCloud is at the forefront of integration with Microsoft 365 to offer the most efficient user experience
 - Ensure sustainability and quality in the construction of our products integrated into Microsoft 365 environments

SharingCloud combines its knowledge of new ways of working with its expertise in implementing the technological innovations of its partners.

We develop very close technological partnerships with major players in the field of Smart Office. This allows us to deliver effective solutions and provide tangible benefits to our customers.

Our tech partnerships accelerate innovation and generate new solutions which aim at enriching our users' journeys by making the most of data. Together, we offer products that are best suited to our customers' needs.

About SharingCloud

SharingCloud is a French software editor – Smart Office expert. Its Instant Suite® comprehensive platform was designed to efficiently digitalize the modern office buildings workspace, simplify users' journeys, and perfectly manage Flex Office. Leader in the European market, SharingCloud enables the new ways of working: remot working, hot desking, as well as square meters optimization, and real estate and ecological impact reduction through powerful analytics capabilities.
